nTier Programmer

MANAGED SERVICES

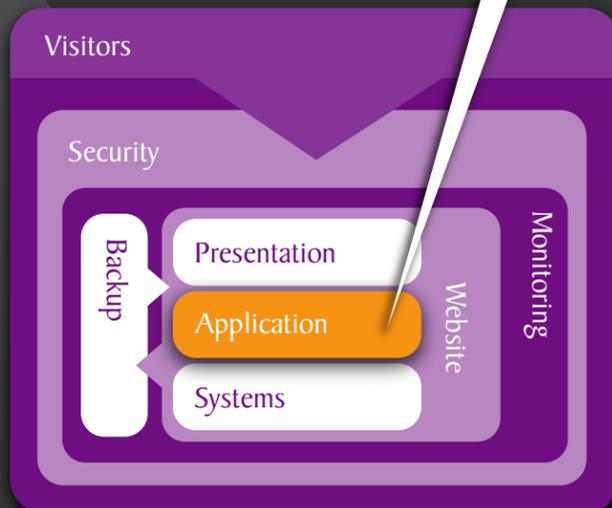

One-on-one support every time with someone who knows your code and configuration.

The nTier Programmer is an application performance service intended to sustain the integrity of your application. This may include adjusting code to perform as the load increases, or as site corrections are imperative. Upon request, this includes any and all code errors, urgent code support (during standard business hours), database performance tuning & optimization, code execution monitoring, 3rd party code debugging & support.

INCLUDED WITH ALL LEVELS:

- Deficiency support of code errors or database errors
- Support for MSSQL, MySQL, Postgres, Oracle, and MSAccess databases
- Support for PHP, ASP, .NET, C#, VB, CFM, and Java programming languages

Level 1

Maintain Program Code

For customers who require assurance that code will perform as designed. Corrective action will be addressed for all server code Errors/ Bugs.

SERVICES

Website Code Errors/ Bugs/ Deficiency Support Server errors are always a concern and having staff available to correct them is important. Now you have your own programming team to ensure your site stays error free.

Level 2

Maintain Database

For customers who require assurance that their database will perform as designed. Corrective support for database scripts/code & objects. DBA Support for troubleshooting database issues.

SERVICES

Database Code Errors/ Bugs/ Deficiency Support When it comes to databases troubles its imperative to have qualified staff ready to act when problems occur. Our certified DBAs have the experience to address and correct problems with the listed supported databases.

Level 3

Optimization (code / database)

For customers who wish to have their application optimized/upgraded/performance-tuned.

SERVICES

Code/Database Performance Analysis If you are finding that your code execution or database response times are getting slower, you might want to have one of our specialists analyze and diagnose the reason.

Code/Database Optimization An increase in response times and pages loading more slowly are clear signs that your application requires optimization. Our team can help optimize your application and prevent possible failure.

Code/Database Maintenance Planning Any active website can use an active maintenance plan to prevent latency, failure or possible loss of data. Your application is an asset - keeping it healthy is crucial for protecting your investment

- Fast
- Gigablast
- Netscape Search
- Snap.Com

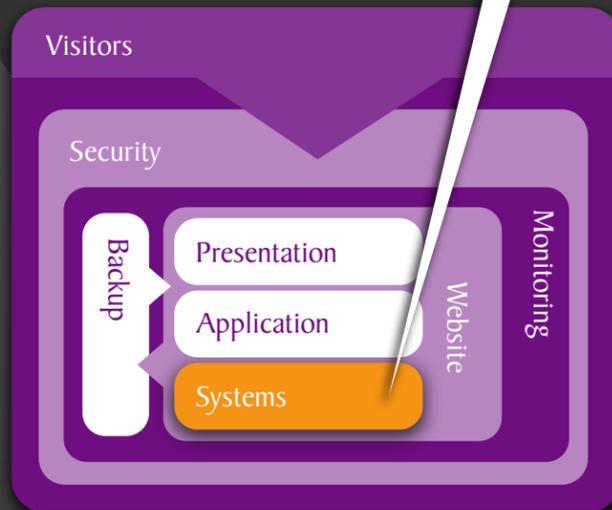

nTier Engineer

MANAGED SERVICES

nTier Managed Professional Services is like having your own web design and IT department standing ready, at a fraction of what it costs to maintain an entire staff.

When running a website there are many administrative tasks required on a regular basis. nTier Engineer provides virtual IT services to ensure you have certified technicians administering your Windows or Unix system.

INCLUDED WITH ALL LEVELS:

- Support of common Unix platforms/Windows/Solaris and most all web servers & server applications.
- Deficiency support of server and OS issues
- DNS & Network Infrastructure Support
- Hard disk space and usage monitoring
- Log space usage monitoring and archiving
- Monthly Server & Application tuning
- Monthly Log review for any corrective issues or server health concerns

Level 1

Server Management

This service is for customers who need support managing their server. This includes all necessary server functions that require management.

SERVICES

Manage Services / Modules / Components Websites have many facets to their operation such as modules, services and components. Our services can help maintain and manage continual operation.

Manage Operating System Whether you use Windows or a Unix based operating system, we have the expertise to manage your server for the best possible support.

Level 2

Installation and Configuration

Provides installation and configuration support for software/modules/languages on a server.

SERVICES

Install / Configure Applications This service is for customers who need off-the-shelf type applications installed and configured. Whether it's a CMS or CRM solution we have the staff to extend your website in many areas.

Install Services / Modules Your online application can be very complex and require additional services or modules to function.

Level 3

Enterprise Engineering Support

Provides enterprise level support for issues related to performance, server configurations, modules, and services.

SERVICES

High Volume Configurations Support for tasks such as Database Clustering or Load balancing.

Preventive Log Analysis Support The only way to prevent server failure is to watch for warnings. Log files are there as warnings to proactively reduce downtime and loss.

Operating System Support If something is going wrong with your operating system, in most cases it takes a certified engineer to correct it.

nTier Monitoring

MANAGED SERVICES

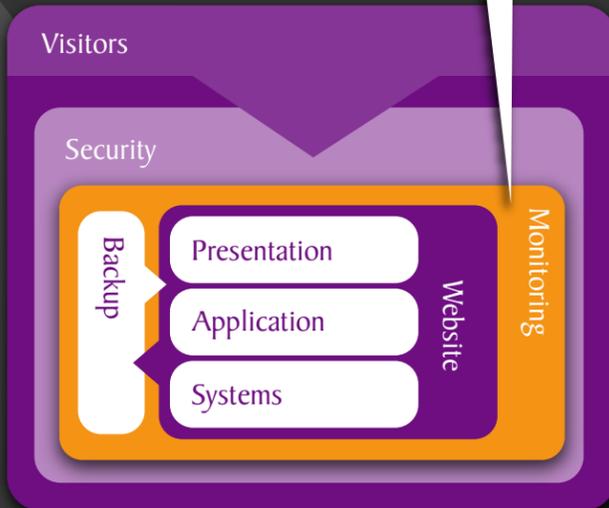

Our monitoring solution not only notifies our engineers of a failure so that it can be expeditiously resolved, but also identifies most potential problems before a failure even occurs.

nTier Monitoring for applications, database, and hardware allows the web admin to respond when server related issues arise, and to predict potential failure points.

INCLUDED WITH ALL LEVELS:

- 24/7 Remediation Support
- Multiple Notification methods available
- Multiple geographical monitoring stations available

Level 1

Port Monitoring

For customers who require standard website uptime monitoring

SERVICES

Server/Website Performance Monitor Provides an end-to-end perspective of web page performance and availability by monitoring from multiple locations simultaneously.

Level 3

Code Performance Monitoring

For customers who want to monitor code and database execution response times

SERVICES

Code Performance Monitoring For server page response times and execution of code, trouble areas can be identified before script failure or database failure by benchmarking response times.

Level 2

Service or Application Monitoring

For customers who need monitoring of other required components that support their website or application

SERVICES

Application/Service Monitoring Reporting real-time correlation of errors and additional application and network statistics as well as database and email monitoring.

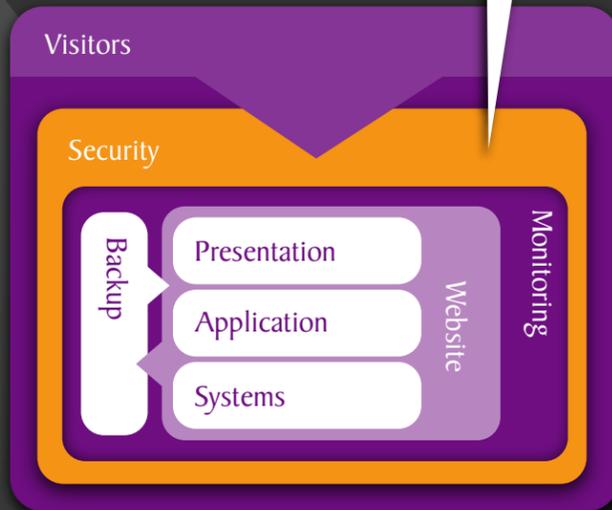

nTier Security

MANAGED SERVICES

We employ project managers with 10+ years of IT experience to ensure that they offer the best technical advice and management for your tasks.

Intellectual Property such as web content is critical to most businesses today. Planning and implementing regular security measures is critical for the protection of data. nTier Security Services includes options to improve the security and privacy of your website and online business applications.

INCLUDED WITH ALL LEVELS:

- 24/7 Security Remediation Support
- Software Firewall
- Security Logging
- System level Encryption
- Log space usage monitoring and archiving
- Anti Virus Software
- Security Patch Management

Level 1

Basic Protection

For customers who are looking for a standard level of security management

SERVICES

Software Firewall Management Both Windows and Unix have firewalls available. A qualified engineer can configure and manage your security with this service.

Permissions Configurations If you've ever tried to set permissions on files, folders, and user accounts you'll realize this should be left to a professional.

Level 2

Active Protection

For customers that want proactive measures in place and regular security checks to ensure all possible safe guards are incorporated for a secure server and website

SERVICES

Security Log Analysis Security logs are available and can alert to intrusion or hack attempts. Reviewing these logs on a regular basis can prevent your server from being compromised

IPs & Intrusion Monitoring Intrusion monitoring can be very complex. Our managed intrusion monitoring provides peace of mind by offering proactive alert notification of hack attempts

Level 3

Custom Protection

Provides a security function as it pertains to necessary guidelines specified.

SERVICES

Compliance Services If you are a doctor or a lawyer you will benefit from our certified security agents who can provide appropriate consultation to secure your information.

Security Auditing Services & Consulting Whatever industry you are in we can offer security consultation services that are customized to meet your requirements. All of our engineers are certified and able to secure your server or network.

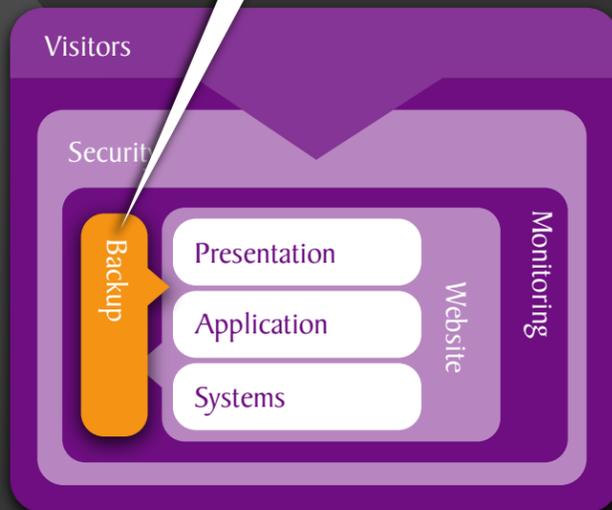

nTier Backup

MANAGED SERVICES

When you've lost files and need to restore from a backup, our engineers' understanding of your system enables them to provide the best diagnosis of the situation. In addition our engineers background experience and familiarity with your system allows them to implement restoration quickly and accurately.

Backing up your assets is essential in this day and age, and keeping them secure is equally important. Our nTier Backup Services go a step further, allowing for files, configurations, databases and disk images to be backed up and managed. We can provide a solid backup system that will provide peace of mind in any situation where reliability is most important.

INCLUDED WITH ALL LEVELS:

- 24/7 Backup Restores
- Daily or Continuous Backups
- Off site backups for maximized protection
- industry standard AES 256-bit encryption on storage ideally suited for higher security needs of Financial, Healthcare and Government organizations.

Level 1

File & Database Backup

nTier Backup offers the reassurance that if you lose data, you can restore individual files, complete folders, and other media.

SERVICES

Backup Management Services	Hands-free secure daily backup management and monitoring
----------------------------	--

Level 3

Configuration Backup

For customers that require configuration file backup. This would include but not limited to web server configurations, database, and application configuration files.

SERVICES

Last Known Good Configuration	For quick restore of corrupted configuration files with versioning support.
-------------------------------	---

Level 2

Version Backup

For customers that need multiple version choices when doing a restore on a individual file, folder, or other media.

SERVICES

Versioning	Supports true versioning & retains up to 30 versions of backed up data.
